ABSTRACT

A graphical user interface for an electronic market for trading products includes an aggregation window which displays additional aggregate quotes for a plurality of price levels of a product traded in the market. A trading system includes client station for entering quotes for securities. The clients have graphical user interfaces at which quotes can be entered and displayed at multiple price levels. The system handles a quote size that is displayable and attributable to a specific market participant, a reserve quote size that is neither displayable nor attributable to a specific market participant, and an additional aggregate quote size that is displayable but not attributable to a specific market participant.
